

The Most Powerful Web & Email Security Solution Available for Education!

Overview

SchoolMarshal is an affordable, secure, easy-to-use email and web content filtering solution and spam control solution for K-20. Specially packaged for the education sector, SchoolMarshal combines the capabilities of **MailMarshal** & **WebMarshal** software to provide your school with the most secure email and web solution.

Solutions for Today

The Internet and email are essential communication tools for most schools today. However, it also creates serious productivity and security issues, providing an entry point for spam, unwanted content and malicious content and an exit point for confidential information.

Spam will reach new heights in 2008. **MailMarshal** is 99.5% effective in stopping spam with virtually zero false positives. But MailMarshal is not just a spam filter! MailMarshal protects against all email threats including blocking spam, phishing, viruses, Trojans, worms, denial-of-service attacks, directory harvesting attacks and spoofed messages. **WebMarshal** allows you to apply policies for web security at your web gateway—providing safer web use for students and faculty. WebMarshal controls both incoming and outgoing web traffic in real-time, manages access to websites, blocks web-based threats such as viruses spyware and other malicious code or dangerous content. WebMarshal also inspects incoming web traffic such as streaming media, downloading file types and manages bandwidth use. In addition, WebMarshal scrutinizes outgoing web traffic including files and web-based email, to secure confidential information and leakage of data via web-based email accounts, etc.

Key Features
